

AnomalyMQ

Real-Time Anomaly Detection Platform

Summary

AnomalyMQ is a real-time anomaly detection system that provides instant detection of system anomalies using statistical algorithms including EWMA (Exponentially Weighted Moving Average) and Z-Score normalization.

Key Features:

- Real-time Processing - Sub-millisecond anomaly detection
- Statistical Algorithms - EWMA & Z-Score statistical models
- Enterprise Security - JWT authentication & role-based access
- Scalable Architecture - NATS JetStream messaging backbone
- Smart Alerting - Configurable rules

Alarms Tab

The Alarms tab provides a centralized command center for monitoring system health and responding to detected anomalies.

Active Topics: 1

Active Rules: 4

Pending Alerts: 0

ID	RULE	SEVERITY	MESSAGE	STATUS	TIME	ACTIONS
11054	3	warning	Rule 'test' triggered: test1 = 0.33	Acknowledged	8/29/2025, 6:42:35 PM	
11053	3	warning	Rule 'test' triggered: test1 = 0.76	Acknowledged	8/29/2025, 6:42:35 PM	
11052	3	warning	Rule 'test' triggered: test1 = 0.56	Acknowledged	8/29/2025, 6:42:35 PM	
11051	3	warning	Rule 'test' triggered: test1 = 0.64	Acknowledged	8/29/2025, 6:42:35 PM	
11050	3	warning	Rule 'test' triggered: test1 = 0.69	Acknowledged	8/29/2025, 6:42:35 PM	
11049	3	warning	Rule 'test' triggered: test1 = 0.48	Acknowledged	8/29/2025, 6:42:35 PM	
11048	3	warning	Rule 'test' triggered: test1 = 0.19	Acknowledged	8/29/2025, 6:42:35 PM	
11047	3	warning	Rule 'test' triggered: test1 = 0.87	Acknowledged	8/29/2025, 6:42:35 PM	
11046	3	warning	Rule 'test' triggered: test1 = 0.43	Acknowledged	8/29/2025, 6:42:35 PM	
11045	3	warning	Rule 'test' triggered: test1 = 0.58	Acknowledged	8/29/2025, 6:42:35 PM	

Show 10 of 11054 alerts

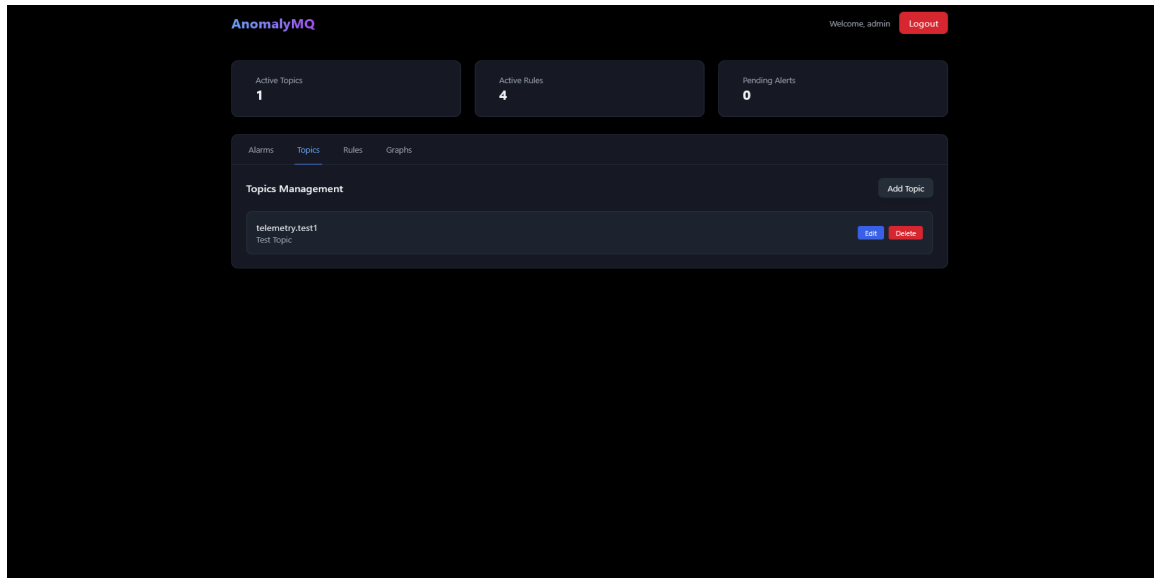

Previous 1 2 3 4 5 1106 Next

Features:

- Live Alert Feed - Real-time display of all system alerts
- Smart Pagination - Efficient navigation through large alert volumes
- Bulk Operations - Acknowledge multiple alerts simultaneously
- Severity Classification - Critical, Warning, and Info level alerts
- Status Tracking - Pending vs. Acknowledged alert management
- Historical Data - Complete audit trail of all system events

Topics Tab

The Topics tab enables administrators to configure and manage data streams from various sources across the infrastructure. It provides flexible stream configuration with real-time configuration updates.

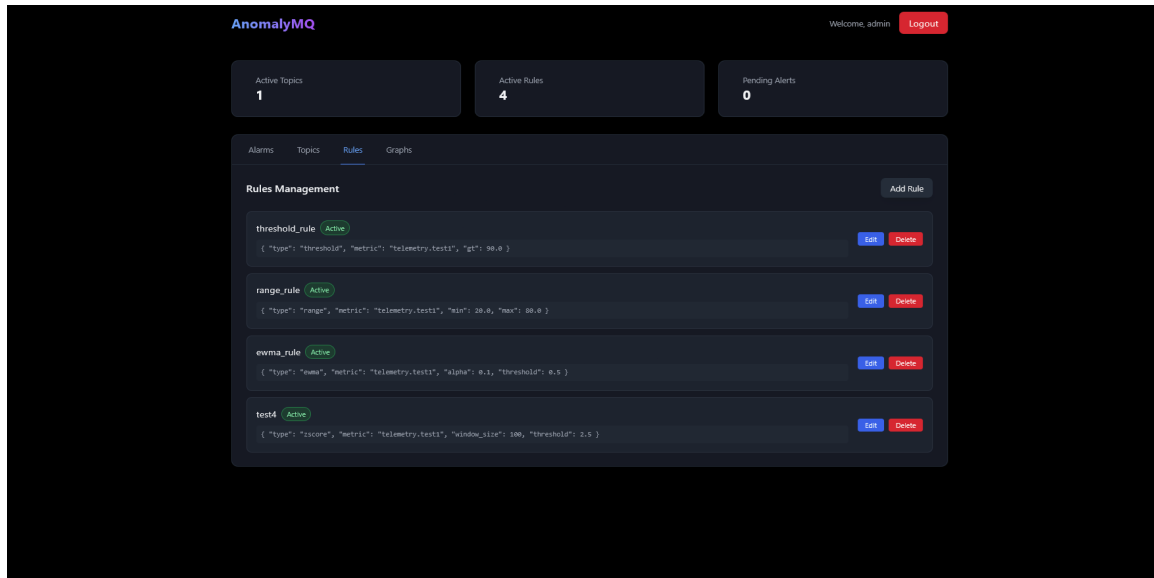

Features:

- Stream Configuration - Define data sources
- Real-time Monitoring - Live status of all active data streams

Rules Tab

The Rules tab provides a powerful rule engine for defining sophisticated anomaly detection algorithms with JSON-based configuration.

Rule Types:

- Threshold Rules - Simple value-based detection
- Range Rules - Min/max boundary monitoring
- EWMA Rules - Trend-based anomaly detection
- Z-Score Rules - Statistical outlier identification

Features:

- JSON Configuration - Flexible rule definition
- Real-time Updates - Dynamic rule loading without restarts
- Enable/Disable Control - Granular rule management
- Performance Optimization - Efficient rule evaluation engine

Graphs Tab

The Graphs tab provides comprehensive visual analytics with interactive charts for monitoring system performance and identifying patterns. It offers real-time data visualization with multiple metric views.

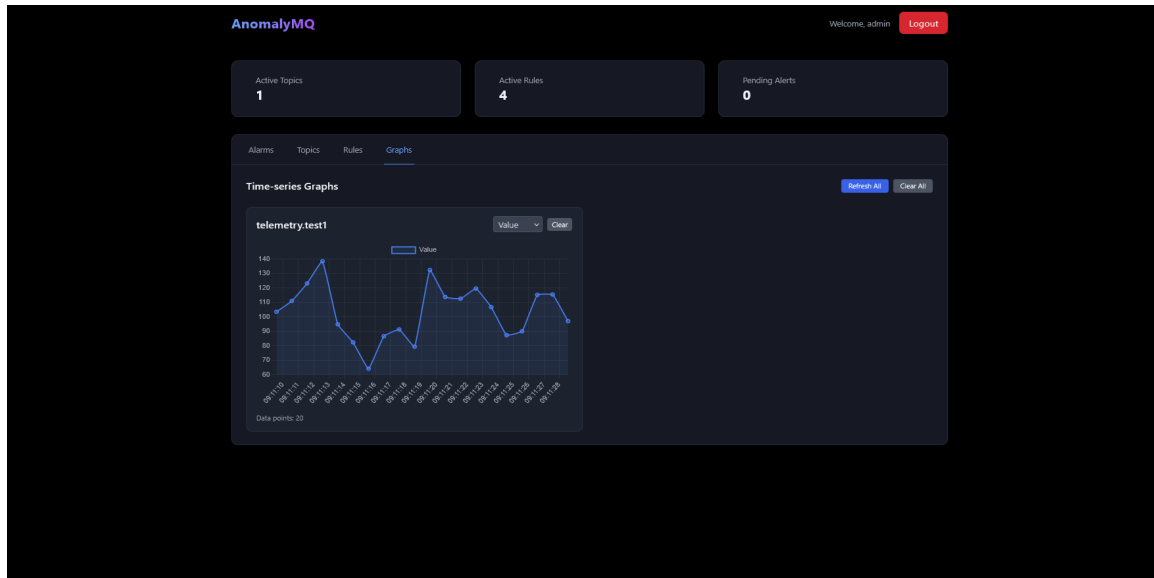

Chart Capabilities:

- Multi-metric Views - Value, EWMA, and Z-Score visualizations
- Real-time Updates - Live data streaming via WebSocket
- Interactive Controls - Zoom, pan, and hover tooltips
- Responsive Design - Optimized for all screen sizes
